

IASB ED/2019/4 Amendments to IFRS 17 – EFRAG comment letter

International Accounting Standards Board  
7 Westferry Circus, Canary Wharf  
London E14 4HD  
United Kingdom

24 September 2019

Dear Mr Hoogervorst,

**Re: IASB ED/2019/4 Amendments to IFRS 17**

On behalf of the European Financial Reporting Advisory Group (EFRAG), I am writing to comment on the Exposure draft ED/2019/4 *Amendments to IFRS 17 Insurance Contracts*, issued by the IASB on 26 June 2019 (the 'ED').

This letter is intended to contribute to the IASB's due process and does not necessarily indicate the conclusions that would be reached by EFRAG in its capacity as advisor to the European Commission on endorsement of definitive IFRS Standards in the European Union and European Economic Area.

EFRAG would like to express its appreciation for your consideration of the topics identified in our letter of 3 September 2018 ('our letter') as well as those from other constituents. EFRAG would also like to commend the IASB for the thorough process to capture and analyse all the concerns and criticisms received. This course of action corroborated the willingness you expressed to act speedily as and when required.

Appendix 1 contains our responses to the questions in the ED. EFRAG is supportive of many of the changes proposed. However, EFRAG:

- a) is concerned that the term 'credit card' under the scope exclusions excludes debit cards which have similar clauses to credit cards;
- b) is concerned about the requirements in paragraph B119B of the ED relating to the investment-return service and the impact on allocation of contractual service margin;
- c) suggests that the proposed text for the definition of 'proportionate' be revisited based on the economic substance of reinsurance contracts;
- d) considers that the risk mitigation option should be extended to financial instruments at fair value through profit or loss;
- e) is of the view that the retrospective application of risk mitigation option on transition is worthy of further attention; and
- f) notes that in applying the fair value approach, an option is available to set the accumulated OCI balance on insurance liabilities to nil on transition but no relief is available to assets measured at fair value through OCI. EFRAG considers that additional relief in IFRS 17 could alleviate concerns of entities.

EFRAG welcomes the IASB's decision to defer the effective date of IFRS 17. However, EFRAG disagrees with 1 January 2022 as the effective date. EFRAG considers that 1 January 2023 is a realistic effective date, with early application permitted.

In addition, EFRAG considers that the necessary amendments to IFRS 4 *Insurance Contracts* extending the optional deferral of IFRS 9 need to be published as early as

possible and, at the latest, before the end of June 2020 so as to enable timely endorsement within Europe before the current expiry date of 1 January 2021.

Furthermore, EFRAG has received input on a number of issues from constituents relating to Question 9 on Minor Amendments and Question 10 on Terminology. These are listed in Appendix 3 of this comment letter for the IASB consideration but for which EFRAG does not have a view at this stage.

Appendix 2 addresses topics that were raised in our letter of 3 September 2018 that we consider warrant further consideration. In particular:

- a) EFRAG acknowledges that the annual cohort requirement has been identified by the IASB as a practical simplification between developing a more principle-based solution that was dismissed as unduly burdensome and meeting the reporting objectives of the level of aggregation. Nonetheless, EFRAG considers that this requirement leads to unnecessary cost in some fact patterns, in particular for contracts with cash flows that affect or are affected by cash flows to policyholders of other contracts. Feedback from EFRAG's constituents confirms that the issue relates to contracts with the characteristics described in paragraphs B67 - B71 of IFRS 17 that have 'substantial' risk sharing. Most of these contracts that prevail in European jurisdictions are eligible for the variable fee approach (VFA). In some jurisdictions the issue relates to contracts eligible for the general model including contracts without the characteristics described in B67 – B71 of IFRS 17 for which cash flow matching techniques are applied across generations. EFRAG believes that it is worth re-considering whether the annual cohorts requirement is justified for such contracts and recommends that the IASB consider developing an appropriate solution for them, reflective of the reporting objectives of the level of aggregation requirements in IFRS 17 and of their economic characteristics.
- b) EFRAG also notes the decision not to allow at transition further modifications to the modified retrospective approach in the interest of comparability. EFRAG remains concerned about implementation challenges faced by preparers and the possibility of unduly strict interpretations that restricts the use of retrospective approaches. Therefore, EFRAG encourages the IASB to confirm in the main text of the final standard that the use of estimates is allowed, including those needed to approximate the missing information. EFRAG also suggests that the IASB clarify that the 'reasonable and supportable information' criterion is not intended to change the judgement ordinarily required in IAS 8 to make estimates.

Finally, EFRAG understands that preparers do not consider the exception to IAS 34 *Interim Financial Reporting* within IFRS 17 to be a simplification. Therefore, EFRAG recommends the IASB to consider whether eliminating paragraph B137 of IFRS 17 or making its application optional would provide a solution.

If you would like to discuss our comments further, please do not hesitate to contact Didier Andries, Fredré Ferreira, Sapna Heeralall, Joachim Jacobs or me.

Yours sincerely,

Jean-Paul Gauzès  
**President of the EFRAG Board**

## Appendix 1 - EFRAG's responses to the questions raised in the ED

### Question 1 - Scope exclusions – credit card contracts and loan contracts that meet the definition of an insurance contract

#### **Question 1 – Scope exclusions – credit card contracts and loan contracts that meet the definition of an insurance contract (paragraphs 7(h), 8A, Appendix D and BC9-BC30)**

- (a) Paragraph 7(h) proposes that an entity would be required to exclude from the scope of IFRS 17 credit card contracts that meet the definition of an insurance contract if, and only if, the entity does not reflect an assessment of the insurance risk associated with an individual customer in setting the price of the contract with that customer.

Do you agree with the proposed amendment? Why or why not?

- (b) If not excluded from the scope of IFRS 17 by paragraphs 7(a)–(h), paragraph 8A proposes that an entity would choose to apply IFRS 17 or IFRS 9 to contracts that meet the definition of an insurance contract but limit the compensation for insured events to the amount required to settle the policyholder's obligation created by the contract (for example, loans with death waivers). The entity would be required to make that choice for each portfolio of insurance contracts, and the choice for each portfolio would be irrevocable.

Do you agree with the proposed amendment? Why or why not?

#### *EFRAG's response*

##### **Credit cards that provide insurance coverage:**

**EFRAG agrees with the exclusion of certain credit cards that provide insurance coverage from the scope of IFRS 17. This is because the exclusion reduces the implementation costs and operational burden for entities that issue credit card contracts for which the entity does not reflect an assessment of the insurance risk associated with an individual customer when setting the price of the contract with that customer. Furthermore, the exclusion is not expected to lead to a significant loss of useful information.**

**However, EFRAG is concerned that the term 'credit card' excludes debit cards which have similar clauses as the credit cards in the scope exclusion. EFRAG considers that both credit cards and debit cards are examples of contracts that should be considered in defining the scope exclusion and that transactions with similar economic characteristics should be treated in a consistent way.**

##### **Loans that transfer significant insurance risk:**

**EFRAG supports the proposal to permit entities, on portfolio level, to either apply IFRS 17 or IFRS 9 to insurance contracts that provide insurance coverage only for the settlement of the policyholder's obligation created by the contract.**

#### *Question 1A - Credit cards that provide insurance coverage*

- 2 EFRAG agrees with the proposed amendment to exclude from the scope of IFRS 17 those credit card contracts that provide insurance coverage for which the entity does not reflect an assessment of the insurance risk associated with an individual customer in setting the price of the contract with that customer.
- 3 EFRAG notes that these products are aimed at providing a certain amount of coverage which includes protection for the quality of the goods sold as well as

coverage in the case that the seller fails to deliver under its non-financial obligations with respect to the sale.

- 4 It is for this reason that EFRAG considers that excluding from the scope of IFRS 17 these credit card contracts would:
  - (a) reduce IFRS 17 implementation costs for some entities; and
  - (b) not result in a significant loss of useful information relative to that which would be provided by IFRS 17 for users of financial statements. Other relevant IFRS Standards would apply to such credit card contracts and would provide relevant information about the components of those contracts to users of financial statements.
- 5 EFRAG considers that debit cards should also be excluded from the scope of IFRS 17. Credit cards and debit cards are examples of transactions that should be considered when defining the scope exclusion requirements; such requirements should provide for similar treatment to be applied to similar transactions.

*Question 1B - Loans that transfer significant insurance risk*

- 6 EFRAG supports the proposals to apply either IFRS 17 or IFRS 9 on a portfolio level for loans with a specific type of insurance risk. This is because EFRAG considers that it would reduce the complexity around bifurcating certain loans from insurance contracts or treating such loans as insurance contracts. EFRAG also acknowledges that the proposed amendments would enable:
  - (a) an entity that mainly issues insurance contracts to apply IFRS 17 to these loans, permitting comparability with the other insurance contracts issued by the same entity; and
  - (b) an entity that mainly issues financial instruments to apply IFRS 9 to these loans, permitting comparability with the financial instruments issued by the same entity, without imposing IFRS 17 implementation costs for such contracts to the entity.

## Question 2 - Expected recovery of insurance acquisition cash flows

### **Question 2 – Expected recovery of insurance acquisition cash flows (paragraphs 28A – 28D, 105A – 105C, B35A – B35C and BC31 -BC49)**

Paragraphs 28A–28D and B35A–B35C propose that an entity:

- (a) allocate, on a systematic and rational basis, insurance acquisition cash flows that are directly attributable to a group of insurance contracts to that group and to any groups that include contracts that are expected to arise from renewals of the contracts in that group;
- (b) recognise as an asset insurance acquisition cash flows paid before the group of insurance contracts to which they are allocated is recognised; and
- (c) assess the recoverability of an asset for insurance acquisition cash flows if facts and circumstances indicate the asset may be impaired.

Paragraphs 105A–105C propose disclosures about such assets.

Do you agree with the proposed amendments? Why or why not?

### *EFRAG's response*

**EFRAG supports the IASB's proposals with regards to the treatment of acquisition cash flows as the resulting financial information will better reflect the economic substance of these transactions.**

**EFRAG agrees with the proposed recoverability assessment approach.**

- 7 EFRAG notes that, from a commercial perspective, an insurer's decision to pay a certain level of acquisition cash flows might take into account its expectation of contract renewals. EFRAG also acknowledges that some contracts would be treated as onerous due to the allocation of acquisition cash flows in full to them (i.e. ignoring the impact of renewals).
- 8 EFRAG supports the proposed amendments because this will provide more relevant information to users of financial statements by better reflecting the economic substance and general understanding of these transactions.
- 9 EFRAG understands that the concern relating to acquisition cash flows relates to contracts that fall under the premium allocation approach ('PAA') given the short contract boundary. EFRAG supports the option that is already under IFRS 17 to recognise insurance acquisition cash flows as expenses for the PAA because this simplifies the measurement for some groups of contracts.
- 10 With regards to impairment, the Exposure Draft proposes that an entity would have to assess the recoverability of an asset recognised applying paragraph 28D of IFRS 17 at the end of each reporting period, if facts and circumstances indicate the asset may be impaired. EFRAG agrees with the proposed recoverability assessment approach.

**Question 3 - Contractual service margin attributable to investment-return service and investment-related service**

**Question 3 – Contractual service margin attributable to investment-return service and investment-related service (paragraphs 44-45, 109 and 117(c)(v), Appendix A, paragraphs B119-B119B and BC50-BC66)**

- (a) Paragraphs 44, B119–B119A and the definitions in Appendix A propose that an entity identify coverage units for insurance contracts without direct participation features considering the quantity of benefits and expected period of investment-return service, if any, in addition to insurance coverage. Paragraph B119B specifies criteria for when contracts may provide an investment-return service.

Do you agree with the proposed amendment? Why or why not?

- (b) Paragraphs 45, B119–B119A and the definitions in Appendix A clarify that an entity is required to identify coverage units for insurance contracts with direct participation features considering the quantity of benefits and expected period of both insurance coverage and investment-related service.

Do you agree with the proposed amendment? Why or why not?

- (c) Paragraph 109 proposes that an entity disclose quantitative information about when the entity expects to recognise in profit or loss the contractual service margin remaining at the end of a reporting period. Paragraph 117(c)(v) proposes an entity disclose the approach used to determine the relative weighting of the benefits provided by insurance coverage and investment-return service or investment-related service.

Do you agree with the proposed disclosure requirements? Why or why not?

*EFRAG's response*

**EFRAG supports the IASB's proposals regarding contracts under the general model. Some contracts under the general model include investment activities and the proposal will ensure that the contractual service margin (CSM) that will be allocated to profit or loss, will reflect both insurance and investment-return services provided to the policyholder.**

**However, with reference to the definition of investment-return services, EFRAG notes that some constituents believe that investment services are being provided to policyholders for certain products even though these products do not have an investment component or a right to withdraw. We suggest the IASB reconsiders the definition of investment return service in paragraph B119B of the ED in the light of this input received from constituents.**

**EFRAG also supports the IASB's proposals regarding contracts under the variable fee approach because these contracts are substantially investment-related contracts.**

**EFRAG considers that the disclosure proposals related to CSM amortisation will provide useful information to users of financial statements but notes that, given the sensitivity of the CSM under the variable fee approach to market conditions, this will only provide users with a partial picture of the future performance of the entity.**

*General model*

General model - Contracts with investment components

- 11 For some contracts under the general model, in addition to insurance coverage the entity provides a service to the policyholder in terms of returning to the policyholder both the policyholder's original investment and an investment return that would not

otherwise be available to the policyholder because of amounts invested, expertise, etc.

- 12 EFRAG considers that the IASB's proposals will lead to the provision of relevant information about the services being provided to the policyholder. Therefore, the resulting CSM amortisation provides a faithful representation of those services being provided.

General model - Contracts without investment components

- 13 EFRAG supports the decision of the IASB to amend the definition of investment-return service and agrees that the existence of a right to withdraw an amount provides evidence that an investment service is provided.
- 14 Feedback from constituents indicates that there are concerns around the requirements to determine when an investment-return service could exist, and in particular the surrender and transferability criteria (paragraph BC58 of the ED).
- 15 Some constituents believe that investment services are provided to policyholders for certain products even though these products do not have an investment component nor a right to withdraw. These products are listed in Appendix 3 of this comment letter.
- 16 We suggest the IASB reconsiders the definition of investment-return service in paragraph B119B of the ED in the light of the above input received from constituents.
- 17 EFRAG considers that the identification of investment-return services could be complex and require significant judgement as to expectations and the terms of the insurance contract. There would be subjectivity in applying the proposed amendment and determining the weighting between the investment-return service and insurance coverage services in order to determine the coverage units and the release pattern of the CSM.
- 18 However, an entity is already required to make similar assessments for contracts which provide more than one type of insurance coverage and disclosures relating to this significant judgement, as further illustrated below. Therefore, EFRAG considers that this proposal will not require the excessive use of judgement and will facilitate users' understanding of the impact of all relevant services on the amortisation of CSM.

*Variable fee approach*

- 19 EFRAG agrees that insurance contracts with direct participation features provide both insurance coverage and investment-related service. IFRS 17 refers to these contracts as being substantially investment-related service contracts under which an entity promises an investment return based on underlying items.
- 20 Therefore, EFRAG supports that, in addition to insurance coverage, these contracts provide investment-related services to policyholders and the coverage units to release the CSM should reflect these services.

*Disclosure requirements*

- 21 Entities have to provide disclosures in terms of:
- (a) quantitative information on the expected recognition in profit or loss of the contractual service margin remaining at the end of the reporting period, in appropriate time bands, and
  - (b) specific disclosure of the approach to assessing the relative weighting of the benefits provided by insurance coverage and investment-related services or investment-return services.

- 22 EFRAG considers that the quantitative disclosures about the amount of CSM expected to be recognised over time are important as these disclosures enable users of financial statements to monitor the profitability pattern and any changes to that profitability pattern, allowing informed comparisons across entities. However, EFRAG also notes that the information in paragraph 109 will only provide partial information on the potential future performance of the entity given the sensitivity of the CSM under the variable fee approach to changes in the market environment.
- 23 EFRAG considers that an entity needs to determine the coverage units (which includes services to be provided in the future) in order to determine the release pattern for the CSM. Therefore, EFRAG considers that preparers should be able to provide this quantitative information without undue cost or effort.
- 24 Currently, IFRS 17 requires entities to disclose significant judgements and changes to those judgements. EFRAG considers that disclosures on the weighting of the benefits would be considered to be significant judgements and consequently these should be disclosed. These disclosures are necessary to enable users to better understand the sources of profit and to make comparisons both between types of contracts and across entities and over time.

**Question 4 – Reinsurance contracts held — recovery of losses on underlying insurance contracts**

**Question 4 – Reinsurance contracts held – recovery of losses on underlying insurance contracts (paragraphs 62, 66A-66B, B119C-B119F and BC67-BC90)**

Paragraph 66A proposes that an entity adjust the contractual service margin of a group of reinsurance contracts held that provides proportionate coverage, and as a result recognise income, when the entity recognises a loss on initial recognition of an onerous group of underlying insurance contracts, or on addition of onerous contracts to that group. The amount of the adjustment and resulting income is determined by multiplying:

- (a) the loss recognised on the group of underlying insurance contracts; and
- (b) the fixed percentage of claims on the group of underlying contracts the entity has a right to recover from the group of reinsurance contracts held.

Do you agree with the proposed amendment? Why or why not?

*EFRAG's response*

**EFRAG welcomes the proposals of the IASB aiming to reduce the accounting mismatches for reinsurance contracts held. However, EFRAG suggests that the proposed text for the definition of 'proportionate' in the ED should be revisited and reconsidered for inclusion of other types of reinsurance contracts based on the economic substance of those contracts.**

- 25 EFRAG welcomes the proposals of the IASB aiming to reduce the accounting mismatches for reinsurance contracts held.
- 26 EFRAG considers that an entity should recognise a gain from the reinsurance contract held when it recognises a loss on initial recognition of an onerous group of underlying insurance contracts or on addition of onerous contracts to that group, to the extent that such reinsurance contract held covers a loss that is also recognised in profit or loss at the same time. This would happen when there is a direct association between the loss on the underlying contracts and the net gain on the reinsurance contract held.
- 27 EFRAG is of the view that the proposed definition of 'proportionate' is too narrow, capturing contracts which are not commonly used in practice and excluding other types of reinsurance that have the same economic substance. EFRAG considers that a definition should focus on the right to recover from the issuer a contractually defined portion of each claim incurred on individual underlying insurance contracts within a group of contracts. EFRAG has been informed by its constituents of a number of examples, listed in Appendix 3 of this comment letter, where they believe that there is proportionate reinsurance.
- 28 EFRAG notes that the definitions of 'proportionate' and 'proportional' have different meanings (which vary by jurisdiction). Accordingly, EFRAG recommends that the definitions used in IFRS 17 should be clarified to avoid confusion.
- 29 EFRAG notes that the IASB has not addressed non-proportionate reinsurance contracts. A peculiarity of such contracts is that there is no one-to-one relationship between the direct underlying contract and the reinsurance contract held, for example because there are many underlying contracts that are covered by a single excess loss reinsurance contract held. Addressing non-proportionate reinsurance may therefore require the need to identify a 'link' between the reinsured risk and the underlying contracts. EFRAG understands that any accounting mismatch for non-proportionate contracts may, in practice, be reduced due to the impact on the risk adjustment rather than on the CSM.

**Question 5 - Presentation in the statement of financial position**

**Question 5 – Presentation in the statement of financial position (paragraphs 78-79, 99, 132 and BC91-BC100)**

The proposed amendment to paragraph 78 would require an entity to present separately in the statement of financial position the carrying amount of portfolios of insurance contracts issued that are assets and those that are liabilities. Applying the existing requirements, an entity would present the carrying amount of groups of insurance contracts issued that are assets and those that are liabilities. The amendment would also apply to portfolios of reinsurance contracts held that are assets and those that are liabilities.

Do you agree with the proposed amendment? Why or why not?

*EFRAG's response*

**EFRAG agrees with the proposed amendments, as they would simplify processes for preparers, decreasing the costs of implementation, without significantly reducing the information available to users.**

- 30 The requirements in IFRS 17 raised concerns that the requirements around disclosures of groups of assets and liabilities may significantly increase the costs of implementation of IFRS 17 without providing commensurate benefits to users.
- 31 EFRAG considers that the amendment to paragraph 78 of the ED provides an operational relief to preparers of financial statements without significantly reducing the loss of useful information for users of financial statements. Further, during the user outreach that EFRAG conducted on the Amendments to IFRS 17, a majority of the users did not object to a presentation at portfolio level.
- 32 Therefore, EFRAG supports the proposed amendments.

## Question 6 - Applicability of the risk mitigation option

### **Question 6 – Applicability of the risk mitigation option (paragraphs B116 and BC101-BC109)**

The proposed amendment to paragraph B116 would extend the risk mitigation option available when an entity uses derivatives to mitigate financial risk arising from insurance contracts with direct participation features. That option would apply in circumstances when an entity uses reinsurance contracts held to mitigate financial risk arising from insurance contracts with direct participation features.

Do you agree with the proposed amendment? Why or why not?

#### *EFRAG's response*

**EFRAG supports the IASB proposals because it addresses an accounting mismatch that arises from using reinsurance held to mitigate financial risks.**

**EFRAG considers that financial instruments at fair value through profit or loss should also be eligible for the risk mitigation, as there are no conceptual reasons to exclude them.**

- 33 EFRAG notes that the risk mitigation exception under IFRS 17 relating to the use of derivatives was created in order to address an accounting mismatch relating to financial risk introduced by the variable fee approach.
- 34 However, there may be an accounting mismatch similar to the accounting mismatch created when an entity uses derivatives as some entities purchase reinsurance to mitigate financial risks of underlying insurance contracts that apply the variable fee approach.
- 35 The accounting mismatch is most apparent when the effect of financial risk for the reinsurance held would be recognised in profit or loss but for the underlying contracts, the effect of financial risk would be recognised in the contractual service margin instead of being recognised also in profit or loss.
- 36 Therefore, in order to address this accounting mismatch, EFRAG supports the IASB proposals to extend the scope of the risk mitigation option to reinsurance contracts held.
- 37 These proposals do not solve all issues however and EFRAG is of the view that further changes should be considered. EFRAG notes that insurers use not only derivatives but also non-derivative financial instruments in their hedging strategies. In our view, there is no conceptual reason why non-derivative financial instruments (when measured at fair value through profit or loss) should be excluded from the risk mitigation option, as they provide the same offsetting.
- 38 EFRAG is also in favour of retrospective application of the risk mitigation on transition as explained in paragraphs 45 to 52 below.

**Question 7 – Effective date of IFRS 17 and the IFRS 9 temporary exemption in IFRS 4**

**Question 7 – Effective date of IFRS 17 and the IFRS 9 temporary exemption in IFRS 4 (paragraphs C1 [Draft] Amendments to IFRS 4 and BC110-BC118)**

IFRS 17 is effective for annual reporting periods beginning on or after 1 January 2021. The amendments proposed in this Exposure Draft are such that they should not unduly disrupt implementation already under way or risk undue delays in the effective date.

- (a) The proposed amendment to paragraph C1 would defer the effective date of IFRS 17 by one year from annual reporting periods beginning on or after 1 January 2021 to annual reporting periods beginning on or after 1 January 2022.

Do you agree with the proposed amendment? Why or why not?

- (b) The proposed amendment to paragraph 20A of IFRS 4 would extend the temporary exemption from IFRS 9 by one year so that an entity applying the exemption would be required to apply IFRS 9 for annual reporting periods beginning on or after 1 January 2022.

Do you agree with the proposed amendment? Why or why not?

*EFRAG's response*

**EFRAG welcomes the IASB's decision to defer the effective date of IFRS 17. However, EFRAG disagrees with 1 January 2022 as the effective date. EFRAG considers that 1 January 2023 is a realistic effective date, with early application permitted.**

**EFRAG agrees with the IASB that the effective date for IFRS 9 should continue to be aligned with the effective date of IFRS 17.**

- 39 EFRAG welcomes the IASB's decision to defer the effective date of IFRS 17, however disagrees with setting 1 January 2022 as the effective date. EFRAG considers that 1 January 2023 is a realistic effective date for first time adoption of this standard, with early application permitted as we understand that some constituents intend to early apply in 2022.
- 40 EFRAG supported the amendments to IFRS 4 *Insurance Contracts* in February 2016 and continues to consider that, in order to provide relevant information to users of financial statements, IFRS 17 and IFRS 9 should be applied together with the same effective date.
- 41 Until both IFRS 17 and IFRS 9 are effective, preparers will have to make an assessment of the expected impact of the standards in order to provide information to users. That is, in accordance with IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*, entities are required to disclose the effect of future IFRS Standards on the current period or any prior period, unless impracticable.
- 42 EFRAG further considers that the necessary amendments to IFRS 4 *Insurance Contracts* extending the optional deferral of IFRS 9 need to be published as early as possible and, at the latest, before the end of June 2020 so as to enable timely endorsement within Europe before the current expiry date of 1 January 2021.

**Question 8 – Transition modifications and reliefs**

**Question 8 – Transition modifications and reliefs (paragraphs C3(b), C5A, C9A, C22A and BC119-BC146)**

- (a) Paragraph C9A proposes an additional modification in the modified retrospective approach. The modification would require an entity, to the extent permitted by paragraph C8, to classify as a liability for incurred claims a liability for settlement of claims incurred before an insurance contract was acquired.

Paragraph C22A proposes that an entity applying the fair value approach could choose to classify such a liability as a liability for incurred claims.

Do you agree with the proposed amendments? Why or why not?

- (b) The proposed amendment to paragraph C3(b) would permit an entity to apply the option in paragraph B115 prospectively from the transition date, rather than the date of initial application. The amendment proposes that to apply the option in paragraph B115 prospectively on or after the transition date, an entity would be required to designate risk mitigation relationships at or before the date it applies the option.

Do you agree with the proposed amendment? Why or why not?

- (c) Paragraph C5A proposes that an entity that can apply IFRS 17 retrospectively to a group of insurance contracts be permitted to instead apply the fair value approach to that group if it meets specified criteria relating to risk mitigation.

Do you agree with the proposed amendment? Why or why not?

EFRAG's response

**Transition relief for business combinations:**

EFRAG supports the IASB's proposals on transition relief for business combinations for both the modified retrospective approach and the fair value approach for practical reasons.

**Transition relief for risk mitigation – transition date:**

EFRAG assesses that the amendment to IFRS 17 to extend the option in paragraphs B115 to B116 of IFRS 17 is a step in the right direction.

However, EFRAG considers that retrospective application of the risk mitigation relief for contracts accounted for under the variable fee approach would provide more relevant information if entities are able to prove, using reasonable and supportable information, that a risk mitigation strategy was in place at the inception of the risk mitigation activity.

EFRAG considers that the wording in the ED is unclear as to whether retrospective application of the risk mitigation according to paragraph B115 is allowed when using reinsurance for risk mitigation purposes.

**Fair value approach:**

EFRAG considers that the possibility to apply the risk mitigation option of paragraph B115 from the transition date and the option to apply the fair value approach when the entity meets the conditions for risk mitigation in paragraph C5A of the ED are a step in the right direction. However, if the IASB accepts EFRAG's suggestion to allow retrospective application of the risk mitigation in paragraph B115, these two options are no longer necessary.

**Additional relief:**

Applying the fair value approach, an option is available to set the accumulated OCI balance on insurance liabilities to nil on transition. No relief is available to assets measured at fair value through OCI. EFRAG considers that additional relief in IFRS 17 could alleviate concerns of entities.

*Question 8A - Transition relief for business combinations*

- 43 EFRAG supports the IASB's proposals for both the modified retrospective approach and fair value approach because it will often be impracticable and entities may not have sufficient information to classify contracts acquired in their settlement period before the transition date as either a liability for remaining coverage or a liability for incurred claims.
- 44 There would be cost/benefit challenges because at the time those contracts were acquired prior to transition, the entity may have managed together the claims for those contracts acquired with other contracts it issued and may have gathered data at a higher level than is required under IFRS 17 making it difficult to distinguish between claims from contracts issued and claims from contracts acquired.

*Question 8B - Transition relief for risk mitigation – transition date*

- 45 EFRAG assesses that the amendment to extend the option in paragraphs B115 to B116 of IFRS 17 is a step in the right direction; as a result of this amendment the risk mitigation relief is applicable prospectively as from the IFRS 17 transition date.
- 46 However, EFRAG considers that entities should apply this risk mitigation relief retrospectively for contracts under the variable fee approach, provided that (1) the entity met the criteria in paragraphs B115 to B116 for the risk mitigation accounting in the relevant past reporting periods and that (2) they are able to prove using

reasonable and supportable information that a risk mitigation strategy was in place before the application of IFRS 17, starting from the inception of the mitigation strategy.

- 47 EFRAG considers that the application of risk mitigation is optional in nature, however once, elected, such retrospective application should be applied mandatorily to all the risk management strategies that existed in the relevant periods; entities would refer to information from their prudential or risk committee reporting.
- 48 EFRAG notes that without retrospective application there would be accounting mismatches in periods prior to transition where a retrospective method is applied as it will result in a contractual service margin that does not reflect risk mitigation activities from previous periods, which would distort:
- (a) the equity of entities - because the effect of previous changes in the fair value of the derivatives will be included in the equity, while the corresponding effect on the insurance contracts will be included in the measurement of the insurance contracts (through the contractual service margin); and
  - (b) the revenue recognised for these groups of contracts in future periods - because the contractual service margin includes the changes in financial risks that would have been excluded had the risk mitigation option been applied retrospectively.
- 49 EFRAG acknowledges that applying risk mitigation retrospectively gives rise to the risk of hindsight being used, as entities could select which strategy would be designated retrospectively and which would not. However, EFRAG considers that, provided that appropriate documentation on risk management strategies exists prior to the transition and that entities may prove with reasonable and supportable information that the conditions in paragraph B116 were met in the relevant past periods, there are no conceptual reasons not to allow retrospective application; in addition in such circumstances the risk of hindsight is reduced.
- 50 EFRAG considers that, in these circumstances, the benefit in avoiding distorted financial information would overcome the risk of hindsight.
- 51 Therefore, in this instance EFRAG is supportive of retrospective application of hedge accounting under IFRS 17 even though EFRAG did not support such a position with the retrospective application of hedge accounting under IFRS 9. This is because EFRAG considers that risk mitigation under IFRS 17 is different from IFRS 9 retrospective application of hedge accounting as under IFRS 17 the choice to exercise the risk mitigation option influences the determination of the contractual service margin which could have long-term impacts on the financial statements.
- 52 EFRAG observes that the wording in the ED is unclear as to whether retrospective application of the risk mitigation according to paragraph B115 is allowed when using reinsurance for risk mitigation purposes.

*Question 8C – Fair value approach*

- 53 EFRAG notes that the IASB has included in the ED two consequential amendments to the decision not to allow retrospective application of the risk mitigation option of paragraph B115, i.e. the possibility to apply the risk mitigation from the transition date (instead of from the effective date) and the option to apply the fair value approach when the conditions for risk mitigation in paragraph C5A of the ED are met.
- 54 EFRAG assesses these two consequential amendments to be a step in the right direction, however, would prefer that the IASB allows the retrospective application of the risk mitigation in paragraph B115. EFRAG considers that, if EFRAG's suggestion to allow for retrospective application of the risk mitigation is accepted by

the IASB, the options granted by these two consequential amendments are not any more appropriate.

*Additional relief on transition*

- 55 Applying the fair value approach, an option is available to set the accumulated OCI balance on insurance liabilities to nil on transition. No relief is available to assets measured at fair value through OCI. Constituents have reported that this asymmetrical treatment may significantly distort equity at transition and future results: assets will generate a yield based on the historical effective interest rate, whilst liabilities will unwind at the market rate at transition date.
- 56 EFRAG recommends additional relief in IFRS 17 which could allow to mitigate this asymmetric treatment at transition and its consequences in the subsequent periods.
- 57 EFRAG considers that this additional relief could alleviate concerns of those entities that believe they will not be able to apply the full retrospective and modified retrospective approaches due to the unavailability of the necessary data.

## Question 9 – Minor amendments

### Question 9 Minor amendments (BC147 – BC163)

This Exposure Draft also proposes minor amendments (see paragraphs BC147–BC163 of the Basis for Conclusions).

Do you agree with the IASB's proposals for each of the minor amendments described in this Exposure Draft? Why or why not?

#### *EFRAG's response*

**EFRAG has been informed about a number of topics that may potentially need to be addressed when finalising the amendments to IFRS 17. EFRAG has not formed a view, at this stage, on these issues.**

- 58 EFRAG has been informed about a number of topics that may potentially need to be addressed when finalising the amendments to IFRS 17. These topics are listed in Appendix 3 of this comment letter with the aim of informing the IASB and EFRAG has not developed a view, at this stage, as to whether standard setting is needed.

## Question 10 – Terminology

### Question 10 Terminology

This Exposure Draft proposes to add to Appendix A of IFRS 17 the definition 'insurance contract services' to be consistent with other proposed amendments in this Exposure Draft.

In the light of the proposed amendments in this Exposure Draft, the IASB is considering whether to make a consequential change in terminology by amending the terms in IFRS 17 to replace 'coverage' with 'service' in the terms 'coverage units', 'coverage period' and 'liability for remaining coverage'. If that change is made, those terms would become 'service units', 'service period' and 'liability for remaining service', respectively, throughout IFRS 17.

Would you find this change in terminology helpful? Why or why not?

#### *EFRAG's response*

**EFRAG has been informed about two terminology changes that may potentially need to be addressed when finalising the Amendments to IFRS 17. EFRAG has not formed a view, at this stage, on these issues.**

- 59 EFRAG has been informed about two terminology changes that may potentially need to be addressed when finalising the Amendments to IFRS 17, i.e. insurance contract services and service period. These are described in Appendix 3 of this comment letter with the aim of informing the IASB and EFRAG has not developed a view, at this stage, as to whether standard setting is needed.

## Appendix 2 – Other comments arising from topics in EFRAG’s September 2018 letter to the IASB that have not been addressed by the ED

### Topic 1 - Annual cohorts

#### *EFRAG’s view*

**EFRAG agrees with the IASB’s reporting objectives of the level of aggregation requirements in IFRS 17: depicting profit trends over time, recognising profits of contracts over the duration of those contracts and timely recognising losses from onerous contracts.**

**EFRAG acknowledges that the annual cohort requirement is a practical simplification between developing a more principle-based solution that was dismissed as unduly burdensome and meeting the reporting objectives of the level of aggregation. Nonetheless, EFRAG considers that the requirement leads to unnecessary costs in some fact patterns, in particular for contracts with cash flows that affect or are affected by cash flows to policyholders of other contracts. Feedback from EFRAG’s constituents confirms that the issue relates to contracts with the characteristics described in B67 - B71 of IFRS 17 that have ‘substantial’ risk sharing. Most of these contracts that prevail in European jurisdictions are eligible for the variable fee approach. In some jurisdictions the issue relates to contracts eligible for the general model, including contracts without the characteristics described in B67 – B71 of IFRS 17 for which cash flow matching techniques are applied across generations.**

**EFRAG therefore believes that it is worth re-considering whether the annual cohort requirement is justified for such contracts. EFRAG recommends that the IASB consider developing an appropriate solution for such contracts, reflective of the reporting objectives of the level of aggregation requirements in IFRS 17 and of their economic characteristics.**

- 60 The unit of account in IFRS 17 is a group of contracts at initial recognition; the same grouping is kept for (i) the determination of the CSM, (ii) its release pattern over the coverage period of the contracts in the group and (iii) the discount rate for accretion of interest on the CSM in the General Model.
- 61 First, insurers have to identify ‘portfolios’ of contracts that are subject to similar risks and that are managed together. The portfolios are then divided into three groups:
- (a) onerous contracts, if any;
  - (b) contracts that at initial recognition have no significant possibility of becoming onerous subsequently, if any; and
  - (c) other contracts, if any.
- 62 Paragraph 22 of IFRS 17 requires additionally that an entity shall not include contracts issued more than one year apart in the same group.
- 63 With reference to specific fact patterns, EFRAG has heard major concerns from constituents that a group of contracts cannot include contracts issued more than one year apart. In particular, stakeholders consider that:
- (a) the requirements will not provide users of financial statements with useful information;
  - (b) implementing the requirements is a major challenge and the benefits do not outweigh the costs; and

- (c) the requirements are unnecessary because an entity can achieve the same outcome without applying those requirements.

*Characteristics of the 'mutualised' model*

- 64 EFRAG understands that the transfer of wealth between generations of policyholders that participate to the same pool of assets is a key feature of life-saving business in several European jurisdictions, such as France, UK, Italy and Germany and therefore represents a common feature for a significant share of the entire European insurance market. The following is a description of the characteristics of such mutualised contracts:
- (a) different generations of policyholders participate to the returns of a common underlying pool of assets;
  - (b) as a consequence, newly issued contracts join the existing population of beneficiaries of the total returns from the pool, so that the mutualisation mechanism lasts more than 1 year;
  - (c) the sharing of the risks among all policyholders relates to financial risk and, in some circumstances, also insurance risk, and the financial risk accounts for substantially the entire variability of the cash flows of the insurance contracts;
  - (d) taking into account the inter-generational mutualisation model, in substance there is no single onerous contract until the group as a whole is onerous;
  - (e) in most cases in many jurisdictions these contracts are eligible to apply the variable fee approach (VFA); and
  - (f) the potential loss for the insurer is generally limited to situations where the returns are not sufficient to cover guaranteed benefits.

*The concerns expressed by Constituents for mutualised contracts*

- 65 EFRAG has heard the following main concerns expressed about the impact of the annual cohort requirement for the mutualised contracts described above:
- (a) Costs and complexity of the requirements: significant changes to systems and increased costs (both at implementation and subsequently). Such changes will also lead to inconsistencies between accounting requirements and business practices;
  - (b) The annual cohort requirement results in limited usefulness to users of the financial information. The splitting of 'mutualised' amounts into groups of contracts issued not more than one year apart is seen as artificial and different to how the business is organised and from the economics of the contracts: the initial allocation of cash flows on an annual cohort basis, which is artificial because there is a common underlying pool of assets, has to be compensated by further artificial allocations. As a consequence, the accounting ignores the economic consequences of the contractual terms and not reflect reality;
  - (c) The level of aggregation requirements will not reflect the level at which pricing, monitoring of profitability as well as risk management of insurance contracts is undertaken in most cases as this is generally done at a portfolio level;
  - (d) The costs of providing the demonstration suggested in paragraph BC138 may be as high as the cost of implementing the annual cohorts requirement: depending on how the requirement is interpreted, providing a detailed quantitative demonstration would entail building new systems and tracking data in a similar way to fully applying the annual cohorts requirement;
  - (e) Annual cohorts are not required at transition in the absence of reasonable and supportable information to apply it, for both the fair value approach and the modified retrospective approach. In the case of groups of mutualised contracts

that share the results of the same pool, where the pool includes both recent generations of contracts (for which the full retrospective approach (FRA) is practicable) and less recent generations of contracts (for which the FRA is not practicable), it would be logically possible to apply the transition exception to the annual cohorts requirement.

*Exception to the use of annual cohorts at transition*

66 It is worth mentioning the following two exceptions are included in IFRS 17 at transition for the use of the annual cohorts:

- (a) Paragraph C10 states that when applying the modified retrospective approach at transition the entity shall not apply paragraph 22 to divide groups into those that do not include contracts issued more than one year apart, to the extent that it does not have reasonable and supportable information to apply the annual cohort requirement;
- (b) Paragraph C23 states that when applying the fair value approach to a group at transition the entity is not required to apply the annual cohort requirement but shall only divide groups into those including only contracts issued within a year or less if it has reasonable and supportable information to make the division.

67 No exception is granted in case of full retrospective approach.

*EFRAG's view*

68 EFRAG agrees with the IASB's reporting objectives of the level of aggregation requirements in IFRS 17: depicting profit trends over time, recognising profits of contracts over the duration of those contracts and timely recognising losses from onerous contracts.

69 EFRAG understands that in order to meet those objectives, the annual cohort requirement has been retained as a practical simplification on a conventional basis. Such a convention derives from the difficulties to promote a principle-based approach. As a matter of fact, the IASB tried to develop a principle-based approach to identifying groups that would eliminate the loss of information, however such an approach was rejected because of feedback from stakeholders that it would be unduly burdensome. The annual cohort requirement is, therefore, a practical simplification between developing a principle-based approach and meeting the objectives of the level of aggregation.

70 EFRAG believes it is worth re-considering whether the annual cohort requirement is justified in some fact patterns, in particular for contracts with cash flows that affect or are affected by cash flows to policyholders of other contracts (in accordance with the heading of paragraphs B67 - B71 of IFRS 17).

71 EFRAG acknowledges and appreciates that the IASB considered in depth in its decision process to find a solution for these mutualised contracts. However, the IASB decided not to add an exception to annual cohorts, as in its view to do so would add complexity and create a risk that the boundary would not be robust or appropriate in all circumstances.

72 EFRAG observes that contracts where the cash flows significantly affect or are affected by the cash flows of other contracts are a common feature of a significant portion of the life insurance business in several European jurisdictions. The IASB has already factored in the characteristics of such contracts in IFRS 17, including in paragraphs B67 - B71.

73 EFRAG has noted the conclusions of the IASB, in particular when in paragraph BC138 the IASB states that introducing an exception would add complexity and

create the risk that the boundary would not be robust or appropriate in all circumstances. However, EFRAG believes that the added complexity is normally justified if it leads to achieving the same benefit at less cost.

- 74 In fact, EFRAG assesses that, for contracts with intergenerational mutualisation, the application of the annual cohort requirement, while being operationally complex, would not provide additional useful information to users, as no specific annual generation of contracts has rights and obligations over a slice of the underlying items. Feedback from EFRAG's constituents (standard setters, preparers, actuary profession and users) on the Draft Comment Letter issued on 15 July 2019 has confirmed this concern.
- 75 EFRAG believes that the technical elements needed to develop a solution are already present in the assessments that the IASB itself performed during the re-deliberation process.
- 76 In conclusion, EFRAG recommends that the IASB re-consider providing an appropriate solution. Feedback from EFRAG's constituents confirms that the issue relates to contracts with the characteristics described in paragraphs B67 - B71 that have 'substantial' risk sharing. Most of these contracts that prevail in European jurisdictions are eligible for the VFA. In some jurisdictions the issue relates to contracts with the characteristics described in paragraphs B67 - B71 that have 'substantial' risk sharing but are not eligible for the VFA and contracts without the characteristics described in B67 – B71 (also not eligible for the VFA) managed using matching techniques under which the cash flows of different generations are aggregated and managed as a group.
- 77 EFRAG considers that the appropriate solution should be reflective of the three IFRS 17 reporting objectives stated above and of the economic characteristics of the contracts.
- 78 For those contracts to which the annual cohorts are not applied at transition, the transition provisions of IFRS 17 should be amended to specify that the annual cohort requirement does not apply to contracts in issue on transition.
- 79 In addition to the information about the reconciliations for the CSM from the opening to the closing balances (according to paragraph 101 of the standard) and the information provided by paragraph 109 of the ED (quantitative forecasts of when the entities expect to recognise in profit or loss the CSM remaining at the end of the period), the following disclosure would enhance the information provided for contracts that are in the scope of the appropriate solution:
- (a) qualitative disclosure describing the grouping criteria for contracts to which the annual cohort requirement is not applied;
  - (b) disclosure on profitability trends by presenting the CSM effect of new business, derived by the quantitative information presented according to paragraph 101 of IFRS 17 for previous years (e.g. 3 in the last 3 years);
  - (c) explanation of the actuarial techniques applied for computing the CSM effect of new business joining the group as well as disclosure on method used for assessing the profitability referred to in (b);
  - (d) explanation of the actuarial techniques for measuring the value of the new business and the allocation of the underlying items between existing business and new business.

## Topic 2 - Transition: Modified retrospective approach and fair value approach

### *EFRAG's view*

**EFRAG is aware that the modified retrospective approach and the fair value approach are two different measurement bases resulting in different outcomes that are not comparable, with the modified retrospective being the approach that aims to approximate the full retrospective approach which applies the most useful information.**

**EFRAG acknowledges the IASB decision not to allow further modifications to the modified retrospective approach, as this would further reduce comparability. However, in order to address the implementation challenges and prevent that a strict interpretation unduly restricts the use of the retrospective approaches, EFRAG recommends that the IASB acknowledges in the main text of the final standard that the use of estimates is allowed, including those needed to approximate the missing information.**

**EFRAG also suggests that the IASB clarify that the 'reasonable and supportable information' criterion is not intended to change the judgement ordinarily required in IAS 8 to make estimates.**

- 80 EFRAG generally supports the retrospective application of IFRS 17 as with the adoption of any new standard.
- 81 EFRAG concurs with the IASB that, in the light of the diversity in previous insurance accounting practices and of the long duration of many types of insurance contracts, retrospective application provides the most useful information to users of financial statements, by allowing comparison between contracts written before and after the date of initial application of IFRS 17.
- 82 EFRAG observes that the modified retrospective approach has been designed to approximate the results of a retrospective application, while the fair value approach is a fall-back based on a different measurement basis, which is not designed to approximate the most useful financial information (i.e. the information resulting from the retrospective application).
- 83 EFRAG is strongly convinced that entities should maximise the use of the full retrospective approach or, when the full retrospective approach is impracticable, maximise the use the modified retrospective approach, in order to achieve to the extent possible useful financial information at transition and in the following years (until the maturity of the contracts existing at transition), before concluding that the fair value approach is the only practicable approach.
- 84 EFRAG is aware of the implementation challenges of both the full retrospective and the modified retrospective approach and in particular that the 'reasonable and supportable information' criterion requires judgement to be applied.
- 85 EFRAG considers that the IASB should clarify that the 'reasonable and supportable information' criterion is not intended to change the judgement ordinarily required in IAS 8 in making estimates. Therefore, it is not intended to add extra burden or difficulty in allowing the application of the modified retrospective approach compared to the use of retrospective application in other IFRS Standards.
- 86 One might consider that a full retrospective approach may be applied solely by collecting detailed data as if the standard had been applied from inception, which might lead to the conclusion that the full retrospective approach is often impracticable. As explained by the IASB in paragraph BC378 of IFRS 17, the modified retrospective approach has been designed to approximate in these circumstances the accounting outcome of a full retrospective approach. EFRAG notes that the modified retrospective approach supplements the full retrospective

approach with focused rules-based solutions where no reasonable and supportable information is available (except the information that might be required to apply the specified modification).

- 87 EFRAG acknowledges the IASB decisions not to allow entities to develop their own modifications, as adding more options to the transition provisions would further reduce comparability. However, in order to address the implementation challenges and prevent that a strict interpretation approach unduly restrict the use of the full retrospective and modified retrospective approaches, EFRAG recommends that the IASB adds further clarifications in the final standard about the use of estimates and the assumptions in case of lack of data. To allay concerns about the difficulties in applying the retrospective approaches, EFRAG recommends that IFRS 17 should acknowledge in the main text of the standard that:
- (a) the existence of specified modifications does not preclude the normal use of estimation techniques in the modified retrospective approach: paragraph BC143 of the Basis for Conclusions of the ED acknowledges that the use of estimates will often be needed in the modified retrospective approach. EFRAG suggests moving this paragraph to the main text of the standard;
  - (b) when applying either the full retrospective or the modified retrospective approach, the entity should search for reasonable and supportable information that is available without undue cost and effort to develop estimates and should apply judgement in making such estimates, as addressed by IAS 8, including those estimates needed to approximate the missing information.
- 88 EFRAG understands that the insurance industry has robust valuation practices developed by actuarial experts. Accordingly, it should be possible in many cases to appropriately recreate missing data using estimation techniques based on reasonable and supportable information.

### Topic 3 – Interim reporting

#### *EFRAG's view*

**EFRAG understands that preparers do not consider the exception to IAS 34 within IFRS 17 to be a simplification. Therefore, EFRAG recommends the IASB to consider whether eliminating paragraph B137 of IFRS 17 or making its application optional would provide a solution.**

- 89 EFRAG acknowledges that the IASB developed the exception to IAS 34 *Interim Financial Reporting* primarily in order to simplify the measurement requirements in IFRS 17. EFRAG understands that preparers in Europe do not consider this exception to be a simplification and would, on the contrary, add to complexity and costs, as they currently use a year-to-date approach rather than date-to-date accounting.
- 90 EFRAG, therefore, recommends the IASB to consider whether eliminating paragraph B137 of IFRS 17 or making its application optional would provide a solution.

## Appendix 3 – Issues raised by EFRAG’s constituents relating to Questions 3, 4, 9 and 10 of the ED

### Examples of contracts/types of contracts not in scope of the IASB amendments

- 1 EFRAG has been informed by its constituents about a number of contracts/types of contracts (see below) that are not in scope of the IASB amendments but these constituents believe should be. The sole aim of these examples is to inform the IASB and EFRAG has not developed a view as to whether standard setting is needed.

#### *Question 3: Contractual service margin attributable to investment-return service and investment-related service*

- 2 EFRAG has been informed that the criteria of transferability and surrender could result in economically similar transactions being treated differently with the following contracts not qualifying for recognition of investment-return services:
  - (a) Spanish deferred annuities without payment on death in the accumulation phase or the pay-out phase (or in both);
  - (b) deferred capital during the term agreed (accumulation period) without death benefit;
  - (c) French saving products related to retirement where the right to withdraw or to transfer can be very limited in practice;
  - (d) contracts with direct participation feature that have a second phase where there are no underlying assets;
  - (e) deferred annuity contracts where the surrender value, which is also the investment component, might be half of the carrying value which is used to calculate the annuity payment. The investment-service definition would be limited to half of the carrying value. If half is surrendered, the constituents question whether the definition of the investment-service means that there is no more investment-service after the surrender even though the rest of the carrying amount develops as before; and
  - (f) The existence of restrictions, e.g. withdrawal not allowed in the first two years or only in cases of divorce, long-term unemployment or long-term disability. For instance, in the case of the two-year restriction, the constituents question whether the investment service is only considered to be included in the contract after two years.

#### *Question 4: Reinsurance contracts held — recovery of losses on underlying insurance*

- 3 EFRAG has been informed by its constituents that the wording in paragraphs B119D, BC80 and BC71 seem to exclude from the scope of the IASB amendment the following examples of reinsurance treaty that they consider have an economic offset:
  - (a) A reinsurance contract that covers the surplus of a fixed percentage of the losses arising from each contract in a group of direct insurance contracts (also called surplus reinsurance contracts), surplus reinsurance, where the insurer engagement is limited, stop-loss or excess-loss reinsurance treaties;
  - (b) Loss occurring contracts (the fixed percentage applies to all claims that occur on the underlying portfolio of risks – as opposed to a group of contracts);
  - (c) Single reinsurance contract covering different underlying groups of insurance contracts;
  - (d) Multiple reinsurance contracts covering a single group of underlying insurance contracts but in different proportions;

- (e) A proportional reinsurance contract that only reinsures some but not all underlying contracts in a group; and
- (f) A proportional reinsurance contract that only reinsures some but not all risks in a group of underlying contracts.

#### Issues raised by EFRAG's constituents

- 4 EFRAG has also been informed about a number of topics stated below that may need to be addressed when finalising the amendments to IFRS 17. These topics are raised with the sole aim of informing the IASB. EFRAG has not developed a view as to whether standard setting is needed.

##### *Question 9: Minor amendments*

##### *Change to the level at which the variable fee approach eligibility test is performed (B107(b)(ii))*

- 5 The Exposure Draft proposes to change paragraph B107(b)(ii) so that the assessment of the variability in the amounts payable to the should be performed 'over the duration of the insurance contract,' whereas previously it was 'over the duration of the group of insurance contracts.'
- 6 EFRAG has been informed by its constituents that there are concerns with the assessment being done at individual contract level rather than at groups of contracts as this would be inconsistent with the unit of account for IFRS 17 measurement and would unduly disrupt the implementation projects and therefore significantly increase costs.

##### *Consequential amendment to IFRS 9 paragraph 2.1(e)(iii)*

- 7 EFRAG notes that as currently worded, the consequential amendment to paragraph 2.1(e) (iii) of IFRS 9 *Financial Instruments* would result in all financial guarantees being included within the scope of IFRS 9.
- 8 EFRAG has been informed that clarifying that this should only be the case for issued financial guarantees would avoid unintended consequences.

##### *Minor amendment: Definition of an investment component (Appendix A of the ED, paragraph BC156)*

- 9 In paragraph BC156, the IASB explains the rationale for amending the definition of an investment component in Appendix A. Specifically, the current BC contains additional characteristics that were not reflected in the definition. The IASB now proposes to clarify and amend the definition such that 'an investment component is the amount an insurance contract requires an entity to repay to the policyholder in all circumstances, regardless of whether an insured event occurs.'
- 10 EFRAG has been informed by constituents that reinsurance contracts are specifically negotiated such that the current definition would often give rise to investment components, which does not appear to have been the intention of the IASB. The constituents therefore ask the IASB to reconsider the proposed wording and to clarify it accordingly.
- 11 EFRAG has also been informed that the proposed amendment to the definition of an investment component is more limiting than appears to be intended by the IASB. The definition could be read in some cases to state that even contracts with explicit account balances do not contain investment components. This does not seem to be in line with the outcome of the TRG meeting in April 2019. One of the conclusions from the TRG discussion on this topic was that as long as the contracts include cash surrender value and/or account or unit balances, it could be assumed that an investment component exists.

*Definition of LIC/LRC definitions (Appendix A of the ED, Defined Terms)*

- 12 EFRAG has been informed that the additional wording (provision (b)) added to the definition of liability for incurred claims (LIC) and liability for remaining coverage (LRC) is difficult to understand. The added provision is appropriate for the LRC definition but is not appropriate for LIC.
- 13 There is a concern that the wording included for LIC means that if an investment-return or investment-related service is no longer provided but there has not yet been an insurance claim under the policy (e.g. a policyholder elects a life-contingent annuitisation), the entity may be required to classify the obligation as LIC and write off the CSM. This was not considered to be appropriate in the example, as insurance coverage is still being provided to the policyholder. It was suggested to remove part (b) for the LIC definition.

*Experience adjustments for premium receipts in P&L vs. CSM – (Paragraphs 106(iv) and B124(d); whether there is a conflict with paragraphs B96(a) of the ED)*

- 14 EFRAG has been informed that the proposed amendments indicate that 'experience adjustment for premium receipts' should be presented as insurance revenue, but this appears to be in conflict with IFRS 17 paragraph B96(a), which indicates that 'experience adjustments arising from premium received in the period that relate to future service' should adjust CSM.

*Investment contracts with discretionary participation features (paragraphs BC149 and 11(b) of ED)*

- 15 Paragraph 11(b) of the Exposure Draft states that a distinct investment component should be separated from the insurance component and measured under IFRS 9 unless it is an investment component with discretionary participation features.
- 16 EFRAG has been informed that it is not clear as to whether the amended paragraph is now stating that, for investment contracts with discretionary participation features, separation of and accounting for the investment component under IFRS 9 is forbidden, or separation as such is not necessary in these cases.

*Excluding changes relating to the time value of money and assumptions that relate to financial risk from changes in the carrying amount of the contractual service margin (paragraph B96, BC157 of the ED)*

- 17 The IASB proposes to exclude changes in relation to the time value of money and to assumptions relating to financial risk from adjusting the carrying amount of the CSM and to amend paragraph B96 accordingly.
- 18 EFRAG has been informed that there is a knock-on question as to where such changes should then be presented in the statement of profit or loss (i.e. as finance or investment income). EFRAG's constituents seek clarification that presenting such changes in full as finance income is appropriate to achieve consistency with the corresponding income from investments. A separation of the investment component into finance and investment income would not seem cost-beneficial, as it would require complex system changes.

*Treatment of changes in underlying items - Paragraphs B128/ BC161 of the ED*

- 19 The IASB proposes amending paragraph B128 such that changes in the measurement of a group of insurance contracts caused by changes in underlying items be treated as changes arising from the effect of the time value of money and assumptions that relate to financial risk for the purposes of IFRS 17. In essence, this would mean that changes in underlying items should always be treated as finance income, regardless of whether the cause that gave rise to the change related or not to the investment.

- 20 Underlying items are not necessarily financial instruments: they may relate to reinsurance, to mortality, etc. Therefore, EFRAG has been informed that treating any changes in the underlying items as finance income does not appear appropriate as it would comingle different sources of income. Such an outcome does not positively contribute to the understanding of an insurer's performance.
- 21 EFRAG has been informed that if the change was non-financial and thus related to the investment, it should be presented as insurance income (and not as finance income); conversely, if the change was financial, it should be presented as finance income.

*Recognition of contracts within a group - paragraph 28/BC 150 of the ED and paragraphs 22/25 of IFRS 17*

- 22 In paragraph BC150 of the ED, the IASB justifies the change proposed to paragraph 28 of the Standard such that inclusion of insurance contracts to a group of contracts depends solely on meeting the recognition criteria and independent of their issuance date.
- 23 However, EFRAG has been informed that the text then contrasts the treatment in the amended paragraph 28 with paragraph 22 of IFRS 17, which is unchanged.
- 24 EFRAG has been informed by constituents that the interpretation of the text before the Amendments were issued has been that paragraphs 22 and 28 were aligned and to be understood in the same way: Recognition of and inclusion into (a) a group of contracts and (b) an annual cohort would depend upon meeting the recognition criteria and not upon the issuance date.
- 25 EFRAG has been informed that the statement in the sentence of BC150 of the ED would cause disruption and system changes that were not foreseen previously. This is partly due to the fact that the allocation of contracts to cohorts when issued means that a different locked-in rate would apply.

*BC148(a): Use of the term 'issued' – editorial comment*

- 26 EFRAG has been informed that paragraph BC148(a) of the ED refers to a change in paragraph 27 but paragraph 27 has been deleted.

*Question 10: Terminology*

*Insurance contract services*

- 27 EFRAG has been informed that a clarification is needed to paragraph 34 of the ED that the cash flows within the contract boundary should include re-pricing of investment related or investment return service.
- 28 EFRAG has also been informed that paragraphs 41(a) and 83 of the ED seem to conflict with paragraph B120 of the ED.
- 29 EFRAG has been advised that paragraph 71 of IFRS 17 specifies that for investment contracts with discretionary participation features (DPF) 'the date of initial recognition (see paragraphs 25 and 28) is the date the entity becomes party to the contract.' The reason for the deviation of the initial recognition date for an investment contracts with DPF from paragraph 25, as the standard was developed, was that these contracts do not have a 'coverage period' based on the original definition.
- 30 Given the fact that the proposed amended definition of the coverage period refers to insurance contract services, i.e. including also investment-return services and investment-related services, a different recognition date for an investment contract with DPF from the default cases is not necessary. Therefore, constituents recommend deleting paragraph 71(a) of the ED.
- 31 EFRAG has also been notified by constituents that the following paragraphs should be reconsidered as to whether the term 'insurance contract services' is needed -

paragraphs 12, 34, 41(a), 83, 103, 104, Appendix A (liability for incurred claims, liability for remaining coverage) and B65 of the ED.

*Service period*

- 32 EFRAG has been informed that the term 'service period' should not be used in paragraph 25 (recognition) or paragraphs 53-59 (PAA) of the ED.
