Equity Instruments - Research on Measurement

1. Why is EFRAG consulting?

As part of its Action Plan on Sustainable Finance, the European Commission ("EC") announced it would ask EFRAG to explore potential alternative accounting treatments to ("FV") measurement for long- term investment portfolios of equity and equity-type instruments.

In June 2018, EFRAG received a request for advice from the EC in relation to the accounting requirements for investments in equity instruments.

The request for advice is part of the EC's initiatives to orient capital flows towards investment in sustainable activities.

The request for advice asks EFRAG to consider alternative accounting treatments to measurement at fair value through profit or loss (FVPL) for equity instruments.

According to the request for advice, such possible alternative accounting treatments should serve the following objectives:
properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are much needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change;
preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

2. The questionnaire

EFRAG has developed this questionnaire in order to gather views from constituents on alternative accounting treatments to IFRS 9 *Financial Instruments* requirements for equity and equity-type instruments held in a long-term investment business model. Such alternative treatments should serve the objectives mentioned above. Respondents are encouraged to read the EFRAG Secretariat background paper available here.

The EFRAG Secretariat background paper provides background information on the request for advice. It explains how the consultation relates to the EC's initiatives on sustainable growth, illustrates the accounting requirements in IFRS 9 and explores some possible alternative measurement approaches.

The possible alternatives in the background paper are to be considered as examples; respondents may suggest other measurement approaches that they consider appropriate.

Additionally, the background paper provides indications of how the concepts of 'long-term investment business model' and "equity-type instrument" may be considered in the context of the questionnaire.

In addition to submitting replies to the questionnaire, constituents can provide their input on the topic and ask questions about the survey by writing to:
Fredre Ferreira (*fredre.ferreira@efrag.org*), or Isabel Batista (*isabel.batista@efrag.org*).

Respondents are encouraged to respond to all questions but are not required to do so. EFRAG will still consider their answers.

EFRAG will disclose the responses, unless a respondent asks for confidentiality.

Please complete this survey by 5 July 2019

3. General information about the respondent

1. Name of the individual/ organisation

ALPHA BANK_SA

2. Country of operation

GREECE

3. Job title

FINANCE DIVISION

4. E-mail address

accounting@alpha.gr

5. Are you currently engaging in a long-term investment business model?

No

6. How do you define long-term investment business model?

7. Are you currently engaging in investment of sustainable activities?

No

8. How do you define sustainable activities?

4. Question 1

9. IFRS 9 allows an entity to account equity instruments either at FVPL or, if applicable, at fair value through other comprehensive income (FVOCI) without impairment and without reclassification ("recycling") to P&L upon disposal of valuation gains or losses previously recognized through OCI ("IFRS 9 requirements" for equity instruments).
When defining an accounting treatment alternative to IFRS 9 requirements for equity instruments held in a long-term investment business model, which characteristics would you require to identify a *long-term investment business model*?

The expected holding period

If you have indicated "Other" please provide details

5. Question 2

10. In your view, is an alternative accounting treatment to IFRS 9 requirements needed to properly portray the performance and risks of equity instruments held in a long-term investment business model?

Yes

6. Question 3

11. Explain the reasons for your reply to question 2, including the key operational challenges in developing a different accounting treatment to IFRS 9 requirements

We would support measurement at FV through other comprehensive income with reclassification to P&L in order to properly portray the performance and risks of equity instruments. However, this accounting treatment should not be restricted to equity instruments held in a long-term investment business model (which in any case is not defined) but should rather be applied to all equity instruments. ____________________________________

7. Question 4

12. With reference to equity instruments held in a long-term investment business model, if you support measurement at FV through other comprehensive income with reclassification to P&L upon disposal of the valuation gains or losses previously recognized through OIC (so called "recycling"), which impairment model would you suggest and how it would work in practice?

Please note that we support the treatment described above for all equity instruments and not for specific equity instruments. In terms of impairment, and in order to overcome the subjectivity of impairment as experienced under IAS 39, we would suggest that a common methodology for the determination of recoverable amount is provided by IASB. In addition, we would suggest that relative requirements permit the reversal of impairment of equity instruments in PL.

8. Question 5

13. Should the different accounting treatment be restricted to equity instruments held in a long-term investment business model?

For more detail, please refer to paragraphs 4.3 to 4.29 of the Background paper.

No

14. Please explain your answer

The accounting treatment should be consistent for all equity instruments. In our view PL is the primary performance indicator and realized gains and losses should be recognized in PL instead of equity.

9. Question 6

15. As per IFRS 9, equity-type of instruments, such as units of investment funds, do not meet the definition of equity instrument of IAS 32 Financial Instruments: Presentation, therefore are not eligible for the option to mesure them at fair value through comprehensive income ("FVOCI"). At the same time, they are not eligible for measurement at amortised cost (as they have contractual cash flows that are not Solely Payments of Principal and Interest, "SPPI" instruments). As such, IFRS 9 requires to account for them at FVPL; no FVOCI option is granted ("IFRS 9 requirements for equity-type instruments").

Should the different accounting treatment referred to in the previous questions be extended to instruments that are "equity-type"?

For more detail please refer to paragraph 4.30 to 4.39 of the Background paper.

Yes

16. Please explain your answer

The approach for an instrument should be the same for both the issuer and the holder, therefore an equity like instrument that is recognized as equity for the issuer applying IAS 32 exception should also be recognized as equity for the holder._

10. Question 7

17. If so, which characteristics would you require to define the "equity-type" instruments?

Units of funds and other instruments that meet the 'puttable exception' in IAS 32

18. If you have indicated "Other" please provide details

11. Question 8

19. With reference to equity and equity-type instruments held in a long term investment business model, please rate how relevant a different accounting treatment is to the objective of reducing or preventing detrimental effects on investment in sustainable activities in Europe.

12. Question 9

20. Are there other characteristics that would justify an accounting treatment different than IFRS 9 requirements for equity instruments and equity-type instruments held in a long-term investment business model? Please provide examples.

13. (untitled)

The following pages include 7 illustrative examples of long term investment. For each scenario, you are invited to answer the questions on the page which follows.

Please consider that for Scenario A, B, C and D IFRS 9 requires to either measure the investment at FVTPL or to elect the option for measurement at FV through other comprehensive income, without reclassification to P&L, upon disposal, of the valuation gains or losses previously recognized through OCI, and without impairment.

14. Illustrative example A - Wind farm with predetermined useful life

21. For scenario A - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

Taking into consideration that the residual value of the investment is 0 and given that dividends are recognized in PL, the gradual decrease of investment (from 100 to 0) should also be reflected in PL (through impairment) together with income from dividends.

22. Which element in the scenario is more relevant for your reply?

1. The definite useful life of the investee's operation
2. The investor's inability to dispose of the shares

23. Which accounting treatments do you support?

Other

In case you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have selected “Other”, please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

15. Illustrative example B - Unlisted single equity instrument

24. For scenario B - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors’ insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

There is no a specific element in the scenario to point out. However, we are of the view that the treatment proposed (2.9 b) should be consistently applied to all equity instruments.____

25. Which element in the scenario is more relevant for your reply?

26. Which accounting treatments do you support?

Other

If you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have indicated "other", please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

16. Illustrative Example C - Open portfolio of equity instruments held with a view to service a long-term insurance liability

27. For scenario C - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

Following the matching principle, upon the settlement of the obligation (i.e. payment of insurance liability) and derecognition of the dedicated asset base, the valuation stock of the equities should also be realized in PL.

____

28. Which element in the scenario is more relevant for your reply?

1. The fact that the entity holds a portfolio of equity instruments

29. Which accounting treatments do you support?

Other

If you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have indicated "other", please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

17. Illustrative Example D - Open portfolio of equity instruments held with a view to service a long-term liability

30. For scenario D - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

Upon the settlement of the obligation (i.e. payment of insurance liability) and derecognition of the dedicated asset base, the valuation stock of the equities should also be realized in PL.

31. Which element in the scenario is more relevant for your reply?

1. The fact that the entity holds a portfolio of equity instruments

32. Which accounting treatments do you support?

Other

If you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have indicated "other", please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

18. Illustrative example E - Long-term investment held indirectly through a unit fund - listed

33. For scenario E - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

There should also be the FVOCI option for equity-type instruments, such as units in funds, in line with the option provided to the issuer for puttable instruments. In addition, the results for the decision of investor to sell (i.e. holding period is short), would enhance investors' insight in the long-term performance of investments PL.____

34. Which element in the scenario is more relevant for your reply?

1. The investor's ability to redeem or sell

35. Which accounting treatments do you support?

Other

If you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have indicated "other", please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

19. Illustrative example F - Long-term investment held indirectly through a unit fund – non listed

36. For scenario F - In your view, is a different accounting treatment needed in order to meet the following two objectives? (i) properly portray the performance and risks of long-term investment business models, in particular for those equity and equity-type investments that are needed for achieving the UN Sustainable Development Goals and the goals of the Paris Agreement on Climate Change; and (ii) preferably enhance investors' insight in the long-term performance of investments, as opposed to recognising point-in-time market-based value changes in reported profit or loss during the duration of the equity investment.

Yes

If yes, please explain why.

There should also be the FVOCI option for equity-type instruments, such as units in funds, as well as the realization of valuation results upon disposal (recycling).____

37. Which element in the scenario is more relevant for your reply?

1. The investor's ability to redeem or sell

38. Which accounting treatments do you support?

Other

If you would support an Accounting treatment other than the examples explored in the EFRAG Secretariat Background paper and/or you have indicated "other", please illustrate the accounting treatment you would support and why.

We would support the measurement choice and accounting treatment described in 2.9 b of the accompanying EFRAG's background paper which is not described above.

20. Thank You!

Thank you for taking our survey. Your response is very important to us.
